2008 NEC Update

The Most Controversial NEC to Date

The 2008 NEC has many controversial changes. Some may not be adopted by L&I, but this dynamic class will highlight about 200 changes will have a significant impact on designing, installing and inspecting electrical systems, including:

- 4 new articles
- 42 circuit limit on panel boards deleted
- Rigid non-metallic conduit is no longer in the NEC
- Change in ampacity of SER cable and change to Table 310.15(B)(6) may increase the cost for wiring dwelling units
- More GFCI requirements
- Common GFCI exceptions deleted
- Significant expansion of AFCI requirements to nearly all dwelling unit receptacles
- Tamper proof receptacles in dwelling units
- Weather resistant exterior receptacles
- Expansion to Arc Flash requirements
- Requirements for generator grounding and bonding clarified
